

Dihydroberberine, Powerful Herbal GLP-1 Agonists

- 

The Hottest Herbal Glucagon-like Peptide 1 (GLP-1) Agonists
- 

More Powerful and Bioavailable Than Berberine (5 times better) For Blood Sugar and Insulin Control
- 

Improves Cardiovascular Health, Weight Loss, and Cellular Longevity by Modulating Various Pathways and Receptors

INGREDIENTS

Dihydroberberine 97%

DOSAGES

100-200 mg/day

TECNICAL INFORMATION

Botanical Source: *Berberis Aristata.* / *Berberis Vulgaris.* / *Phellodendron amurense* / *Coptis chinensis Franch*

Part Used: Root

Appearance: Yellow powder

Specification: 97% HPLC

Extract Solvent: Water & Ethanol

Carrier: None

Preservation: 24 months

Certification: cGMP, FSSC22000, ISO, HACCP, Kosher, Halal, US Organic

Supplementation of Berberine usually come with some shortcomings, including high dose requirements and gastrointestinal distress. **Well, these shortcomings can be overcome with Dihydroberberine.** Multiple studies found that dihydroberberine causes fewer stomach problems, it's likely due to its lower dosing and better absorption.

SCIENTIFIC-PROVEN EFFICACY

- Research suggests that **dihydroberberine is up to 5 times better than standard berberine**, bringing incredible effects at lower doses — and fewer side effects.

- Dihydroberberine group experienced significant improvements in adiposity, triglyceride buildup and a **44% increase in insulin sensitivity compared to berberine.** At the same dose, berberine had no effect on adiposity or glucose tolerance.
